- Enjoy sexual relations on the day of procedure.
- Increased sensitivity.
- Increased desire.
- Tighter vaginal skin.
- Almost instantaneous results.
- Fast & relatively painless.
- Better, healthier sex.

How does it work?

The O-Shot® procedure is a quick, usually painless, 20 minute, nonsurgical procedure. The O-Shot® procedure begins with a simple blood draw. Then, using a proprietary technique, platelet rich plasma is extracted from the blood and injected into the numbed area near the clitoris and upper vagina. There is no recovery time and the results are almost immediate in some women.

Who can get it?

Almost anyone can get an O-Shot®. Your doctor or nurse will help you determine if this is the best procedure for you. Women both on and off hormone replacement therapy can usually benefit from the O-Shot® procedure.

Lichen Sclerosus Patients

In a recent study, researchers determined that most Lichen Sclerosus patients showed improvement by using the O-Shot® procedure. Women reported statistically significant improvement in symptoms & pathologists observed a decrease in inflammation.
